2 Cor. 4. 13.
Credimus: ideo loquuti sumus.

1591.

A Prognostication *for the same yeere* M.D.XCI.

Conteyning a short discourse of the Eclipse of the Moone, and of the quarters of the yeere, with other necessarie Rules, for the better vnderstanding of the Almanacke going before: wherin are Rules for the finding the planetarie hower very easely and pleasantly, as also the rising and setting of the Sunne any day throughout the yeere, referred with the other, to the same Meridian.

By I. D.

Deum nescire est nihil intelligere.

Imprinted at London by Richard VVatkins and Iames Robertes.

Cum priuilegio Regiæ Maiestatis.

[illegible]

To his very friende P. L.

ALL the Learned (friende P. L.) agree with one voyce, that *CHRIST* our ſauiour was conceyued at the Sunnes entraunce into *Aries*, and borne vpon the ſhorteſt day, when the Sunne entred into *Capricorne*: wherefore to ſet Chriſtmas vpon the ſhorteſt day, and draw the Kalender backe in proportion thereunto, me thought, was very expedient: and the rather, becauſe of all in generall, a reformation long tyme hath been deſired, and a fruition of the Feaſtes, vpon their ancient times. For conſideryng that the immoueable Feaſtes ought to keepe the ſame dayes they vſed to do in euery Moneth before, it of neceſſitie followeth, that they muſt be kept at other tymes (in reſpect of the motions of the Sunne) then for many yeeres they haue done. As for Eaſter, and the moueable Feaſtes which folowe the courſe of the Moone, they were by *Conſtant. magnus* once corrected: but ignorance of obſeruation in continuance of tyme hath bred great errour ſithens, in ſo much as many yeeres they miſſe their due tymes a moneth at leaſt, and therefore of late haue had a ſeconde Reformation: which although it be very truely performed for Eaſter, and it appendances, yet the Monethes not reuocated to the true degrees of the Sunne, deſerued a new annimaduerſion. And therefore friende P. L. I haue not attempted this, as a newe fangle, and louer of nouelties (the which I haue alwayes hated) but as a furtherer of the trueth, which I alway haue loued. *Vale, et mecum fruere 4. Kalendas Aprilis.* 1590.

To the Reader.

IT was my chaunce (curteous Reader) this laſt Lent, to be in company of dyuers, aſwell Worſhipfull as Learned: amongſt whom, vpon occaſion of talke geuen, grew ſundry argumentes about the true keeping of Eaſter: and thereupon, as [illegible] adiunct and thing appendant [illegible] about the reformyng of the [illegible] ſome maynteyning the old, ſo [illegible] Romiſh Kalender, corrected by Gregorie, and ſome impugning them both, as not brought to their due and ancient Periodes: Which Conference had awhyle, pro et con, and apparent manifeſtation of the trueth ſhewed for a thirde correction to be required, the concluſion was an intreatie of me (who had borne a part amongſt them) that at my conuenient leaſure, I woulde attempt the ſame, againſt the next yeere, conſideryng that of this yeere then was welnigh a quarter ſpent: which motion made by ſuche as I coulde not well denie, and partly that the trueth myght appeare, I willingly haue attempted. Beholde therefore a thyrde correction, both true and exacte, wherein (as in the laſt) none of the immoueable Feaſtes are altered from their dayes of the monethes they were placed in the olde Kalender, So Eaſter is appoynted to the next Sunday followyng the firſt full Moone after the Sunnes entraunce into Aries, and the moueable Feaſtes in proportion to it, and euery expect ſatiſfied: The which with all other happines, I wyſh thee hartely to enioy.

Vale. 24. Aprilis. 1590.

IT is good to Purge, the Moone being in the watri trigon, vz. in Cancer, Scorpio, or Piſces. or my
In Cancer by Electuaries, in Scorpio by Potions, in Piſces by Pilles: And yf neede be, in Libra and Aquarius, which are indifferent for any Purging medicine.
The tymes of the yeere fittest, are the Spring and Harueſt: the worſt, Sommer and Winter: the one for it exceding colde, the other for exceſſiue heate.

For letting of Blood.

There are two tymes, { the one of neceſſitie. / the other by election.

The fyrſt is to be vſed out of hand, or els great peryll of death may enſue to the partie, as in the Pluriſies, and Squinanſies.

The latter is to be choſen after the motion of the Moone though the .xii. ſignes, in this ſore.

Let the { Phlegmatike / Melancholik / Chollerike } be let blood the Moone being in {
Aries, except in the head.
Sagittari, except in the thighes and hippes.
Libra, in the firſt .15. degrees, except in the buttockes.
Aquarius, except in ỳ legges.
Cancer, except in the breſt.
Scorpio, except in ỳ priuities.
Piſces, except in the feete.
}

The Sanguine in any of theſe.

Minution is prohibited in Leo. for that it is the houſe of the Sunne, who is alwayes repugnant to the Moone in nature. Alſo is is prohibited in Gemini. for that commonly the minution is by ſome Veines in the armes and handes: and no man ought to touche that member with Iron, which the Moone then gouerneth.

Furthermore, it is good from the change to the fyrſt quarter for youth: from the fyrſt quarter to the full, for youth and myddle age: from the full to the laſt quarter, for myddle age and olde age: from

Elections.

the last quarter to the change, for olde age only, according to the verse,

Luna vetus veteres, iuuenes noua luna requirit.

The Moone in age, the ancient fort,
Their veynes may open best:
The younger fort tyll Moone be newe,
Must let their veynes haue rest.

Last, the age of the partie to be let blood is much to be considered: for none before. xiiii. or after. lxx. yeeres, ought to be let blood: the first, for slendernes of the veynes: the later, for debilitie of nature, vnles the olde men be fleshy, full of blood, and strong.

For Bathing.

The Moone in { Libra or Pisces, for clenlynes.
Aries, Leo, or Sagittarius, for grosse bodyes.
Cancer, Scorpio, or Pisces, for dry bodyes.

For sweatyng, vse the same consideration which is in bathing.

Cut heare, the Moone in Libra, Sagittarius, Aquarius, or Pisces, and in the encrease.

Sow Seedes which you woulde haue to yeelde fruite the same yeere, the Moone being in moueable signes, as Aries, Cancer, Libra, or Capricorne: it wyll be best when she is in Virgo, Capricorne, or Cancer, if she be increasing in number. The like is to be sayd of Pisces.

But to plant Trees for continuance, let it be whyleft she is in Taurus, Leo, or Aquarius.

Fell Tymber from S. Barnabies day in June, tyll the first Kalendes of Januarie, in the wane of the Moone.

Fell fire wood, that the stocke may soone spring, from the change to the first quarter.

To remoue Graffes, or young Trees, at the last quarter of the Moone.

Good to geld or libbe Cattle, in Sagittarius, Capricornus, or Pisces, the Moone encreasing.

Of the Eclipse of the Moone.

THe Moone this yeere shalbe Eclipsed the. xx. day of December, at. iii. of the clocke in the morning, and almost a quarter, she being then in her proper mantion Cancer, almost corporally conioyned with the malignant planet Saturne, and within two degrees of her Dragons head in the seconde house, the house of substaunce and riches: which what it may presage, I leaue it to others to discusse. My meanyng is not to vse long and tedious discoursing in a matter not very necessary, and familiar to euery one, considerynge the peerely passions which happen to these great lyghtes: and therefore with prayer to God, to auert the euyll threatned thereby, I cease for this point.

The beginning of the foure *Quarters of this yeere:*

And fyrst of the Spring.

THe Spring taketh his commencement and beginning the. xi. day of March, at two of the clocke. l. minutes after noone, at such tyme as the Sunne entreth into the first scruple of Aries, making the day and nyght then equall, and the æquinoctium vernum, whereby I gather that the yeere is lyke to proue indifferent fruiteful, and temperate, neither subiect to many stormes nor shewers, nether hindered by too exceeding nought, so that there is no want, penurie, or scarcitie, by Gods permission to be feared.

Of the Sommer.

THe Sommer beginneth the. xii. day of June, at. xi. of the clocke and. xxxvii. scruples in the forenoone, when the Sunne entreth into the fyrst minute of Cancer, making his solstitium æstivum, longest day, and returneth againe Southward from whence he came. This season wyll proue some thing remisse in heate.

A Prognostication.

Of the Autumne.

THe Autumne commenceth the. xiii. day of September, at. xi. of the clocke. xiii. minutes at nyght, the Sunne entring the first scruple of Libra, the æquinoctiall signe, and now hastning towarde the Winter tropicke, describeth an equalitie betwixt nyght and day. This quarter wyll proue something colder then the nature thereof requireth, and more moyst then vsuall.

The Winter.

WInter beginneth the. xii. day of December this yeere, at iiii. of the clocke. xlv. minutes after noone, at the Sunnes first touching of the first scruple of Capricorne, his solstitium brumale, and winter Tropicke, making the shortest day and longest nyght: and endeth at the Sunnes entrance into Aries next folowyng. This quarter wylbe very colde, and kindly.

To know Sunne rising and setting.

TUrne to the day of the moneth you desire to know, and if it be the. i. the. v. x. xv. xx. xxv. or. xxx. you may from your day looke towardes your right hand in a right line, and so vnder their titles finde them: but yf it be none of these dayes, then you must note what the difference is in minutes betweene the next day which is precisely put downe before your day, and also the next so set downe which foloweth, and thereof take such part, or from your day abate such part as the dayes encrease or decrease proportionally, wherein yf you borrow or reiect a minute or two, to make euen your accompt, it forceth not greatly: As for example. I desire to know the Sunnes rysing and setting the. iii. of Januarie, agaynst which day I finde no numbers at all, wherfore according to my rule, I must looke for some day nexte vnto, noted as here the first is, and lykewyse for some day folowyng, as is the. v. which done, I seeke the difference, and fynde it. iiii. and that I must vse proportionall substraction, for that the numbers decrease: and therefore I say, yf the first day the Sunne rise at

viii. of the clocke and. iiii. minutes, that the. ii. it shal rise at. viii. and. iiii. mn. and the. iii. at. viii. and. ii. minutes, and so my demande satisfied. Here you see that euery day looseth iust one minute, and that the difference falleth out mecte with the dayes, notwithstandyng that it had beene a minute more, or lesse: as for example. iii. or. v. you might haue accompted. iii. or. v. iiii. at your pleasure, without any great errour, and so haue made the difference match to the number of dayes.

To finde the planetarie or artificiall houre vpon the day.

SEe how many howers, your houre of the clocke is from Sunrysing, and multiplie these houres by. 60. and diuide them by the quantitie of your artificiall hower agreeable to the day, and the quotient sheweth how many artificiall howers and minutes of an other artificiall hower (if there be any annexed) be past: wherefore adde one to the number of howers found, & that is the hower required.

Example.

I would know the first of Januarie what Planet reigned at. iii. of the clocke in the after noone: I therefore abate. viii. of the clocke iiii. minutes, which is the Sunne ryse from. xv. howers. 0. min (for so is iii. of the clocke to be reckoned, that is to say, the after noone howers are to be added to. xii and then Sunrysing to be abated) and so there remayneth. vi howers. lvi. which are vi. houres. lvi. minutes. Now the howers brought to minutes by multiplication of. 60. are 360. vnto which adde. 56. the minutes which are besides your howers, and so wyll the Sunne amount to. 416. which diuided by. 39. minutes and. 20. secondes (for so you must vnderstande the quantitie of the artificiall hower to be set downe in min. and secondes) yeeldeth the tenth hower: whereby you may conclude, that the tenth Planet, that is to say ♄. by course reckoned from the planet of the day, is the planet which then hath finished his course, and that the planet that is next in order folowyng hath begunne his course, and then reigneth for that hower and tyme. Adde therfore one vnitie to your number. 10. found, and enter the table folowyng, and so shall you finde Saturne reigning. If you finde in the quotient howers and minutes, they shewe so many

howers past, and so many minutes more of another artificiall hower next folowyng: yea of that hower which your mitie added, and the rest altogeather sheweth. Note, as often as you cannot diuide your distance brought into minutes by the planetarie hower reduced to secondes, you must multiple it agayne by. 60. and so bryng it into secondes, as in the last example is done. Furthermore, yf your day proposed haue neyther numbers of Sunne rising, nor quantitie of planetarie hower, you must do for both, as you were taught to do for the Sunne rising, and then proceede with your rule last rehearsed.

The Table seruing to finde the planetarie hower vpon the day, where the first colume conteyning the figures 1. 2. 3. 4. and so to. 12. standeth for the number of howers, the next colume for Sunday, the thyrde for Munday. &c.

To

70

To know the planetarie hower for the nyght.

ABate the quantite of your planetarie hower of that day from 120. minutes, and the remayne sheweth the quantitie of the artificiall hower for the nyght: which founde, proceede as for the day, adding your howers after midnight to. 12. and so taking your distaunce betweene Sunne sette and your howers, by abatyng the hower and minute of sunne sette, from your tyme proposed, countyng sunne sette the beginning of the first planetarie hower for the nyght, and so succesliuely, as this Table sheweth.

The Table for the nyght, where the lyke columes are referred to the lyke dayes of the weeke, as before.

Annis
Annualis

A Prognostication.

To know at what hower of the clocke such a Planet reigneth.

BUt yf you desire to knowe at what hower of the clocke such a Planette beginneth his reigne, then multiply the quantitie of the planetarie hower, by one lesse then the number of the planetarie hower, whether it be. 1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. or any number vnder. 13. because there are but. 12 howers for the day, and so many for the nyght, and diuide the product by 60. yf the diuidente be minuts, or els by. 3600. if secondes: and the quotiene sheweth your desire: if any thing remaine, they are minutes, besides the howers of the clocke: which howers and minutes founde in the quotient, adde to sunryse, yf it be for the day, or to Sunset, yf for the nighe, and so haue you your purpose. Example. For the same day aboue rehearled, I woulde knowe when the. 4. planet, that is ♄. reigned: Wherefore I multiplie. 39. min. 20. secondes by. 3. and diuide by. 3600. and thereof commeth. 2. howers of the clocke. 20. minutes, and. 20 secondes, which added to. 8. howers and. 4. minutes, being sunryse, bringeth. 10. of the clocke. 24. minutes, and 20. secondes, when the. 4. Planet began his reigne.

A Man in Gaol for High Treason by Counterfeiting the Coin of this Realm.

Upon Information laid before Mr. Justice Robinson, that there was in Gaol a Person (who had been Committed for High Treason in Coining) that had Counterfeited the Coin of this Realm, and was Executed for the same, he sent for the Gaoler, and asked him, Whether the Person Executed was the Man in Gaol? The Gaoler answered, No, for he was in Gaol still. Upon which the Justice bid him bring him to the Bar, and he would Discharge him, for he was not willing that any Man should be Executed in his stead.

Ein Centner Hamoth Gewichts

Now I have thus my Reckoning right as I hope it is and stand upon it, I pass all the rest of my Life in a due serious consideration of my Sins, and in praying to God for Pardon through the Merits of my Blessed Saviour Jesus Christ. So God

Richard Robinson
